

LATEX BODYSUIT INSTRUCTIONS

BEFORE USE

First, turn your latex suit inside-out then gently hand wash it (in cold water) with a mild dish detergent. Thoroughly rinse your latex suit with cold water, then hang to air dry.

!!! WARNING !!!

Never apply Saliclear to your skin (or any chemical peel) before using this latex suit. Saliclear is salicylic acid 30% (acetaminophen/aspirin) and it will leech into your blood stream if you wear a latex bodysuit or wrap your body in plastic wrap after applying Saliclear to your skin. You WILL end up in ER for aspirin over-dose. This isn't fatal, but an aspirin over-dose isn't a healthy either. Saliclear/Salicylic Acid 30% is supposed to stay on top of the skin, and it does that when applied topically alone - with no use of deep skin penetrating plastic wraps or latex bodysuits.

INSTRUCTIONS

First apply your skin bleaching cream/serum to your entire body. Then put on your latex bodysuit. You can wear the bodysuit for 30-45 mins, then remove your latex bodysuit. Rinse off the excess skin bleaching cream/serum in the shower. Dry off then apply regular body lotion/moisturizer.

LATEX BODYSUIT MAINTENANCE

To prolong the life of your latex bodysuit. After each use, turn your bodysuit inside-out the rinse it off with cool to luke warm water, then hang to air dry. You can wash your latex bodysuit in the washing machine, but make sure you set it on the shortest most delicate wash cycle and only wash with cold water. Always hang to air dry, never put your latex bodysuit in the clothes dryer or it will be melted & destroyed.
