

SKIN WHITENING PEN

BEFORE USE

First wash and sanitize all working parts of this tool with bleach & soapy water. Rinse thoroughly and let them air dry.

INSTRUCTIONS

First crank the knob on the pen's plunger to make sure it can turn freely in both directions. If it sticks and won't turn, forcibly turn the knob until it turns in both directions. Be careful not to break the knob off. Turn the knob so the plunger is all the way down to the base. Use a pointed syringe to fill the pen's reservoir with your cream/serum. Then secure the pen with the brush top. Now turn the knob to extract the cream/serum inside. This pen brush is *'airtight'* and will preserve the skin bleach inside as long as you always replace the cap when not in use.
