

## Trichloroacetic Acid 100% (TCA)

CAS#: 76-03-9

### **WARNING:**

This is a highly caustic material that will cause burns if used incorrectly. TCA 100% strength is highly concentrated, and used for 'TCA Cross' treatments or diluted to lower percentages for full-body usage. If you're not a professional or not experienced with using TCA 100%, please research & educate yourself **FIRST** before attempting a D.I.Y TCA peel. You can start by thoroughly reading my 'Chemical Peel Guide' <http://x420.tv/chempeelguide> as reference point. This guide also contains TCA peel application instructions. If you need specific instructions for a specific skin issue (i.e. removal of: tattoo, skin tag or other small skin tumor, ingrown nail, moles, hammer nails, etc.) please contact me instruction.

### STORAGE

Keep it out of the sun and away from any heat source to preserve the solution longer.

**Sunburn Alert:** During/After exfoliating your skin, your skin will be more sensitive to the sun. ALWAYS wear sun protection (*and keep skin covered when possible*) when going outdoors even on cloudy days.
